

Use These Tips to Avoid Risks

1

Respect all forms of intellectual property that you find online—computer software, songs, stories, pictures, games, and movies.

2

Never accept illegal copies of computer software online or on disk.

3

Make sure you have permission from the copyright owner before you make a copy.

4

Never borrow or share computer software.

5

Beware of super discount computer software—you're probably buying an illegal copy.

6

Protect your identity on the Internet—never give out personal information or agree to meet an unknown “friend” without a parent’s permission.
